Div:

	Group-B (Unit-2 Interactive Web Development)
2	1) Interactive Quiz App – Build a JavaScript-based quiz with real-time score updates. 2) Online application – Create a Gate registration form and validate using java script. 3) Smart To-Do List – Develop a dynamic to-do list with deadline reminders. 4) BMI Calculator App-Build an interactive BMI calculator using form inputs and JavaScript for logic and display.

Title: Interactive Quiz App

Problem Statement: Build a Javascript-based quiz with real-time Score updates

Aim: To design and develop **an interactive quiz application** using **JavaScript** that provides real-time score updates based on user choice selections on questions.

Algorithm:

1. Start
2. Initialize Variables
 - 2.1. Multiple choice questions with options should be displayed using html and css
 - 2.2. Correct answer (variable)
 - 2.3. Set score = 0 (variable)
3. Display question and options on the web page.
4. Accept User Input
5. Wait for the user to select an option (via button click or radio button)
 - 5.1 Check Answer
6. Compare the selected option with the correct answer
7. If correct: (if variables matches)
 - 7.1. Increment score by 1
8. Update Score in Real-Time
9. Display updated score immediately on the screen and display final result.
10. Stop

Academic Year 2025-26 (Semester-IV)

Expected Output:

1. The application displays a quiz interface on a web page with:
 2. A question
 - 2.1. Multiple answer options (radio buttons or buttons)
3. When the user selects an answer:
 - 3.1. The system evaluates the response immediately
 - 3.2. The score is updated in real time and displayed on the screen
4. A result message is shown (e.g., "Quiz Completed", "Your Score: X/Y")
5. Timer display for each question (Optional, but do give it a try)

Output: (Logic)
